Diceware Guide

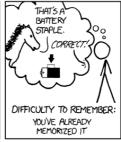

THROUGH 20 YEARS OF EFFORT, WE'VE SUCCESSFULLY TRAINED EVERYONE TO USE PASSWORDS THAT ARE HARD FOR HUMANS TO REMEMBER, BUT EASY FOR COMPUTERS TO GUESS.

What is a Diceware passphrase?

A passphrase is a bunch of words and characters that you type in to your computer to let it know for sure that the person typing is you. Passphrases differ from passwords only in length.

Diceware is a method for picking passphrases that uses dice to select words at random from a special list. Each word in the list is preceded by a four digit number. All the digits are between one and six, allowing you to use the outcomes of four dice rolls to select a word from the list.

Directions

- **Step 1:** Decide how many words you want in your passphrase. A five-word passphrase provides a level of security *much* higher than the passwords most people use. For NSA-proof security, use seven.
- **Step 2:** Roll all four dice at once and write the results down, reading from left to right, on a scrap paper. Make as many of these four-digit groups as you want words in your passphrase.
- **Step 3:** Flip to the word list and look up the corresponding word next to each four-digit number.
- **Step 4:** The words that you have found are your new passphrase! If you wish, roll the dice one more time to choose one word to Capitalize, and again for a digit to add to the end.
- **Step 6:** Come up with a way to remember your phrase. It might be a story, scenario, or sentence that that can remind you of the particular words you chose, in order.

A five-word passphrase is one of 3,656,158,440,062,976 (or about 2^{51}) alternatives that could have been chosen by this method. With so many possibilities, this passphrase will be very hard to guess by brute force.

Example

Suppose you want a five word passphrase. You will need 5 times 4 or 20 dice rolls. Let's say they come out as:

1, 6, 6, 6, 5, 1, 5, 6, 5, 3, 5, 6, 3, 2, 2, 3, 5, 6, 2, and 6.

Write down the results on a scrap of paper in groups of four rolls:

1666

5 1 5 6

5 3 5 6

3 2 2 3

5626

You then look up each group of five rolls in the Diceware word list by finding the number in the list and writing down the word next to the number:

1666 cognitive

5156 poetic

5356 ribbon

3223 garlic

5626 smelliness

Your passphrase would then be:

cognitive poetic ribbon garlic smelliness

Questions & Answers

Shouldn't I never write my password down?

In today's world, major corporations are hacked every week, and distributed cracking networks can break complex passwords in record time. It's safest to use a strong, unique password for each account you hold, but this makes memorization impractical.

Once, people were told not to write passwords down, ever, but the consensus among security professionals has evolved. You're better at protecting this book than corporations are at securing their password databases.

Can I just pick my own words from the word list?

No. Humans are terrible at being unpredictable, and hackers are great at exploiting predictability. The primary reason that Diceware creates secure passwords is that you have no agency in the process.

Should I leave spaces between the words?

Yes. It makes your passphrase more secure, and easier to type on a mobile phone.

How many words should I use in my passphrase?

The most important accounts, such as e-mail, e-commerce and financial sites, should use at least five words.

Other accounts like social media can reasonably use three words, as long as each password is used only once.

What if I lose this book?

The real purpose of this book is to provide you with the tools to generate strong, memorable passwords that are unbreakable by the world's most powerful computers. It need not be the only place that you record them.

What if someone steals this book?

If you choose to write passwords in this book, feel free to modify them in some way that is only known to you. This will prevent a casual thief from using your passwords, even if they have this book. Just be absolutely sure that you can remember what you have changed.

Are password manager apps like 1Password safe?

Yes, as long as the master password is strong & secure. For example, if Google Chrome is configured to store your password, make sure that you have a strong Google password, and don't leave your account logged on computers or mobile devices that are not secure. The same is true for Safari and your iCloud account, or Internet Explorer and Windows Live.

PasswordSafe (https://pwsafe.org/) and its associated mobile apps are a good alternative password manager that is not tied to a web browser or e-mail account.

Who invented Diceware?

Diceware was invented by Arnold G. Reinhold, a computer scientist living in Cambridge, MA. Diceware was first published to Usenet's sci.crypt.research on August 1st, 1995. For more information, visit http://world.std.com/reinhold/diceware.html.

This book implements a simplified version developed by the Electronic Frontier Foundation (EFF) which uses only four dice and is optimized for typing on mobile phones.

What is the danger in re-using a password?

Imagine that you used the same password for an online clothing store, and your e-mail provider. Months later, the clothing store is hacked and your password stolen. The hackers login to your email and find correspondence from your bank. They use the bank website to reset your online banking password,

and intercept the confirmation email sent by your bank. From here, they use the bank website to order checks in your name, initiate transfers, etc.

This story illustrates why the security of your e-mail ranks above others in importance: for hackers, it can be the gateway to all of your accounts.

How can I find out if my password has been stolen?

Visit https://haveibeenpwned.com/ or a similar site, and type in your e-mail address. They track the data leaks released by hackers, and can identify which e-mail addresses were hacked, and how much data was released.

If your e-mail tests positive, immediately change the password for the sites listed **and** any sites that might have used the same password.

What is two-factor authentication?

Two-factor authentication enhances your password by sending a code to your phone or another device, which you then have to type in in order to be authorized. This ensures that even if someone has your password, they also need to have your phone.

It's a good idea to set up two-factor authentication on any account linked to your bank account or credit cards.

What is phishing?

Phishing is when a hacker sends you an email that appears to be from an organization you have a relationship with, but is actually a trap to get you to give up your password.

Phishing e-mails typically warn you that something is wrong with your account, and urge you to log in via a link. They can be very realistic and insidious.

Always check the URL in any e-mailed links you click, and make sure that they take you to the site you expect. Better yet, ignore links in e-mails and go directly to the website for the organization.

What is social engineering?

Social engineering is when a hacker contacts a company you do business with and pretends to be you. Often this means telling customer service that you have lost your password, and trying to convince the representative to change it or otherwise unlock your account.

The best protection against social engineering is to avoid using easily-guessed security questions, such as your mother's maiden name. When offered an opportunity to enter such security questions, generate a Diceware password instead.

How can I stay safe online?

Above all, practice good operational security (opsec). Be suspicious and careful online.

Minimize the number of accounts you open, and always choose the best account security available.

Keep track of the accounts you open, close unused accounts, and change passwords on active accounts frequently.

Prefer to shop with businesses that have strong online safeguards, and take advantage of identity protection and online shopping protection services offered by *reputable* financial services.

What to do if I've been hacked?

The resources at www.crashoverridenetwork.com and staysafeonline.org are a good starting point. They provide tools that help determine whether you have been hacked and can help regain control over your online accounts.
